

Description

- Operation mode and max sensing range:
Thru-beam: 0-45 m
Retro reflective: 0,1-12 m
Polarised retro reflective: 0,1-10 m
Diffuse proximity: 0,1-3 m
Background suppression: 0,1-1,5 m
- Compact rectangular housing (50x50 mm)
- Cable or rotatable plug connection
- Sensitivity adjustment via potentiometer
- Switch selectable light or dark function
- Adjustable on/off time delay
- Power, output and signal level indicators
- 10-30 V dc or 12-240 V ac/dc supply voltage
- 4 wire, NPN/PNP output or 5 wire relay output
- Test input

The SP 2000 series consists of a self-contained transmitter SPT and receiver SPR, which are to be used in thru-beam mode, SPRR for retro-reflective, SPPR for polarised retro-reflective, an SPP for diffuse proximity and SPBS for background suppression. All are offered with sensitivity adjustment via integral potentiometer, and with either cable or 180° rotatable plug connection.

The complete series is available either as a 4 wire, NPN/PNP transistor output with 10-30 V dc supply voltage or as a 5 wire, SPDT relay output with a 12-240 V ac/dc supply voltage. Both offer switch selectable light or dark function and potentiometer adjustable 0-10 sec on/off time delay.

The test input in the 10-30 V dc, SPT is intended to be used for disabling or enabling the transmitter power temporarily for test purposes or for multiplexing applications.

The dc series is protected against reverse polarity of power supplies, test input and output signals. The output is protected against short circuit and inductive loads.
