

Description

- 0-10 metre sensing range
- 12 to 384 channels
- Channel spacing of 5, 10 or 20 mm
- Active length of 225 mm to 1920 mm
- Housing length of 300 mm to 1980 mm
- Plug connection
- 18-30 V dc supply voltage
- Power, output and system status indicators
- 33x36 mm aluminium housing with T-slot mounting
- High tolerance to hostile environments
- IO-Link communication interface
- Up to 4 digital outputs with software configurable functions
- Analogue output 4-20 mA and 0-10 V with software and control wire configurable function
- PC software for parameter configuration and diagnostics with optional USB-IO-Link Master 02

The SS 02-IO series is an advanced, industrial measuring light curtain system which consists of a self-contained transmitter SST and receiver SSR, which can either be positioned opposite or next to each other for thru beam or diffuse proximity mode. The light curtains are housed in sturdy aluminium profiles (33 x 36 mm) with T-slot mounting rail, available in lengths ranging from 300 mm to 1980 mm.

The SS 02-IO series supports a wide range of geometrical analysis functions which may be used for measurement, positioning and monitoring functions. This version of the SS 02 light curtain is equipped with an IO-link communication interface. Parameters and settings can be programmed and monitored through the IO-link interface. These selectable/adjustable settings include: scan mode, operation mode, gain

control/mode, hysteresis, blanking function and smoothing (pre-filtering) function. The light curtain offers a 2-wire analogue output (4-20 mA or 0-10 V) and up to four individual digital outputs which can be individually configured with a selection of a wide range of measurement and output conditions. A digital input is included to switch between two different output readings on the analogue output.

A test input in the SST may be used for either disabling or enabling the transmitting power temporarily for test purposes. The transmitter and receiver are electrically synchronised by wire connection. Both transmitter and receiver units are protected against reverse polarity of power supplies, control inputs and output signals. Output is protected against short circuit and inductive loads.

Technical Data							
		SST			SSR		
Supply voltage		18-30 V dc					
Current consumption		100 mA			75 mA		
Digital output	Type	–			NPN or PNP		
	Max. Load	–			100 mA		
Analogue output	Type	–			4-20 mA / 0-10 V (software selectable)		
	Current output load	–			≤ 600 Ohm		
	Voltage output load	–			≥ 1 kOhm		
	Bit resolution	–			16 bit		
IO-Link communication		–			Yes		
Light source		Infrared (880 nm)			–		
Channel spacing		5 mm	10 mm	20 mm	5 mm	10 mm	20 mm
Number of channels (diodes per detector)		48 ... 384	24 ... 192	12 ... 96	48 ... 384	24 ... 192	12 ... 96
Number of beams	Parallel	48 ... 384	24 ... 192	12 ... 96	48 ... 384	24 ... 192	12 ... 96
	Cross	142 ... 1150	70 ... 574	34 ... 286	142 ... 1150	70 ... 574	34 ... 286
Active length		225 ... 1920 mm					
Housing length		300 ... 1980 mm					
Max. response time		–			(N x 120 µs) + 2 ms		
Power on indicator		Green LED					
Output indicator		–			Yellow LED		
System status indicator		–			Red LED		
Housing dimensions (w x d)		33 x 36 mm					
Housing material	Profile	Aluminium (black anodised)					
	Lens cover	CoPET					
Connection Cable, PVC Ø 5,9 mm		0,5 m cable with 5 pin, M12 plug			0,5 m cable with 12 pin, M12 plug		

Note: "N" is equal to the number of beams (parallel or crossed).

Environmental Data

	SST	SSR
Vibration	10-55 Hz, 0,5 mm	
Shock	30 g	
Light immunity @ 5° incidence	–	100 000 lux
Temperature, operation	–30 to +60 °C	
Temperature, storage	–40 to +80 °C	
Sealing class	IP 67	
Approvals	CE UK CA

General Setup

	Name	Description	Value Range
1	Scan Mode	Select scan mode	Parallel beam scanning / Crossed beam scanning
2	Gain Control	Select gain control mode	Manual gain / Automatic gain
3	Automatic Excess Gain Level	Set the excess gain level of receiver, when used in automatic gain mode	0-255 (2 - 10)
4	Manual Gain Level	Adjust the gain level of the receiver	0-255 (0 - 100%)
5	Hysteresis Level	Adjust the hysteresis level	0-255 (0% - 35%)
6	Digital Output INV	Invert the status of all digital outputs	True / False
7	Hole Detection	Invert the status of all beams	Selected / Not selected
8	Minimum Size of Coherent Area	Specifies the maximum size of objects that shall be ignored	Beam number
9	Don't Save Settings	Settings will not be saved in permanent memory	True / False

Analogue Output

	Name	Description	Value Range
1	Enabled	Output is enabled or disabled	True / False
2	Type	Select between 4-10 mA current or 0-10 V voltage output	Current / Voltage
3	Function (Control Input High)	Select the function that becomes active when control input is high	DIS, FBB, .. SD
4	Function (Control Input Low or Not Connected)	Select the function that becomes active when control input is low	DIS, FBB, .. SD
		Output is disabled, i.e. constantly de-energised	DIS: Disabled Output
		Position of the first beam blocked	FBB: First Beam Blocked
		Position of the first beam made	FBM: First Beam Made
		Position of the last beam blocked	LBB: Last Beam Blocked
		Position of the last beam made	LBM: Last Beam Made
		Position of the (FBB+LBB) / 2 rounded to nearest integer	MBB: Middle Beam Blocked
		Total number of beams blocked	TBB: Total Beams Blocked
		Total number of beams made	TBM: Total Beams Made
		Reads out the number of beams in the largest group of adjacent beams blocked	CBB: Contiguous Beams Blocked
		Reads out the number of beams in the largest group of adjacent beams made	CBM: Contiguous Beams Made
		The number of transitions in the beam pattern between made beams and blocked beams	TRN: Number of Transitions
		Reads out LBB - FBB+1, corresponding to the size of a single object contained in the beam pattern, counted in beam breaks	OD: Outside Dimensions
		Reads out the count of beams made between first beam broken and last beam broken. This corresponds to the size of a hole in a single solid object in the light curtain	ID: Inside Dimensions
		Reads out the number of the first beam in the largest group of adjacent beams blocked	CFBB: Contiguous First Beam Blocked
		Reads out the number of the last beam in the largest group of adjacent beams blocked	CLBB: Contiguous Last Beam Blocked
		Reads out the speed of an object. The speed is positive if the object moves towards the higher beam number and negative if it moves in the opposite direction	SD: Speed and direction
5	Minimum Speed Control High	The velocity that corresponds to 4 mA / 0 V. When AO is in Speed and Direction mode and Control input is High	-4000 - 4000 (-40.00 - 40.00 m/s)
6	Maximum Speed Control High	The velocity that corresponds to 20 mA / 10 V. When AO is in Speed and Direction mode and Control input is High	-4000 - 4000 (-40.00 - 40.00 m/s)
7	Minimum Speed Control Low	The velocity that corresponds to 4 mA / 0 V. When AO is in Speed and Direction mode and Control input is Low or NC	-4000 - 4000 (-40.00 - 40.00 m/s)
8	Maximum Speed Control Low	The velocity that corresponds to 20 mA / 10 V. When AO is in Speed and Direction mode and Control input is Low or NC	-4000 - 4000 (-40.00 - 40.00 m/s)
9	Force Set Enable	Allows the user to write values direct to the analogue output	True / False
10	Forced Value	Defines the value of the analogue output (in beam position)	0 - 384 beams
11	Moving Average Time Constant	The analogue output is filtered with a moving average	0 to 2000 ms

SIO / Digital Output

	Name	Description	Value Range
1	Enabled	Output is enabled or disabled	True / False
2	Function	Select output function used for comparison	DIS, FBB, .. SA
		Output is disabled i.e. constantly de-energised	DIS: Disabled Output
		Position of the first beam blocked	FBB: First Beam Blocked
		Position of the first beam made	FBM: First Beam Made
		Position of the last beam blocked	LBB: Last Beam Blocked
		Position of the last beam made	LBM: Last Beam Made
		Position of the (FBB+LBB) / 2 rounded to nearest integer	MBB: Middle Beam Blocked
		Total number of beams blocked	TBB: Total Beams Blocked
		Total number of beams made	TBM: Total Beams Made
		Reads out the number of beams in the largest group of adjacent beams blocked	CBB: Contiguous Beams Blocked
		Reads out the number of beams in the largest group of adjacent beams made	CBM: Contiguous Beams Made
		The number of transitions in the beam pattern between made beams and blocked beams	TRN: Number of Transitions
		Reads out LBB - FBB+1, corresponding to the size of a single object contained in the beam pattern, counted in beam breaks	OD: Outside Dimensions
		Reads out the count of beams made between first beam broken and last beam broken. This corresponds to the size of a hole in a single solid object in the light curtain	ID: Inside Dimensions
		Reads out the number of the first beam in the largest group of adjacent beams blocked	CFBB: Contiguous First Beam Blocked
		Reads out the number of the last beam in the largest group of adjacent beams blocked	CLBB: Contiguous Last Beam Blocked
		Position of any beam blocked	ABB: Any Beam Blocked
		The digital output is high if the signal is not OK	ALM: Signal Alarm
3	Operator	Select comparison operator	<, >, □, □, =
4	Function Compare Value	Select value to compare with	0 - 1000
5	ABBA: Level 1	Output changes status if any beam is blocked within the area(s) set in the Low / High limit	0 - 384 Beam
6	ABBA: Level 2	Output changes status if any beam is blocked within the area(s) set in the Low / High limit	0 - 384 Beam
7	Force Set Enable	Allows the user to set the value of the digital output	True / False
8	Forced On	Output is set to high or low	True / False
10	On-Delay	On-delay time between the expression becomes true and the output is switched	0 - 400 (0.0 - 10.0 s)
11	Off-Delay	Off-delay time between the expression becomes false and the output is switched	0 - 400 (0.0 - 10.0 s)

Blanking

	Name	Description	Value Range
1	Measure Blanking From Light Curtain	Obstructed areas are read from light curtain and written as text in blanking text box. Blanked beams can be seen in values for Write Blanking to Light Curtain after upload	True (write only)
2	Blanking [1]	Blanking value for first set of 8 beams in a binary value	0 - 255 (0-8 beams blanked)
3	Blanking [2]	Blanking value for second set of 8 beams in a binary value	0 - 255 (0-8 beams blanked)
4	Blanking [3]	Blanking value for third set of 8 beams in a binary value	0 - 255 (0-8 beams blanked)
..			
49	Blanking [48]	Blanking value for beam 377 to 384	0 - 255 (0-8 beams blanked)

Name	R/W	Value	State	Unit
Measure Blanking From Light Curtain	r			
Write Blanking to Light Curtain	w			
Blanking [0]	r	0		
Blanking [1]	r	0		
Blanking [2]	r	0		
Blanking [3]	r	0		
Blanking [4]	r	0		
Blanking [5]	r	0		
Blanking [6]	r	0		
Blanking [7]	r	0		
Blanking [8]	r	0		
Blanking [9]	r	0		
Blanking [10]	r	0		
Blanking [11]	r	0		
Blanking [12]	r	0		
Blanking [13]	r	0		
Blanking [14]	r	0		
Blanking [15]	r	0		
Blanking [16]	r	0		
Blanking [17]	r	0		
Blanking [18]	r	0		
Blanking [19]	r	0		
Blanking [20]	r	0		
Blanking [21]	r	0		
Blanking [22]	r	0		
Blanking [23]	r	0		
Blanking [24]	r	0

Process Data

	Name	Description	Value Range
1	SIO	Indicates status of SIO output	True / False
2	Digital Output 1	Indicates status of digital output 1	True / False
2	Digital Output 2	Indicates status of digital output 2	True / False
3	Digital Output 3	Indicates status of digital output 3	True / False
4	Digital Output 4	Indicates status of digital output 4	True / False
5	Digital Input 1	Indicates status of digital output 1	True / False
6	Analogue Output Value	Indication of the analogue output value	0 - 384 Beams
7	Signal Alarm	Indicates a pre-warning of low signal level	True / False
