Key Exchange Station HST-W10

Intended use

The key exchange station HST-W10 is normally used to safely trap keys of a machine or system.

No secondary keys can be removed from the exchange station until all primary keys have been inserted and trapped. The primary keys remain trapped until all secondary keys have been returned.

In conjunction with other components, the exchange station serves to increase the number of identically coded keys. It is thus the interface between the switch-off components of the system and the interlocks at the guards. It is used in precipitators, steel or power plants, or mines etc.

Functional diagram (Picture shows Ident No. 10372)

Original position before key exchange, secondary key trapped

1 primary lock 7 secondary locks

After key exchange, primary key trapped, secondary keys free and can be removed

(Key not supplied)

Technical Data

Environment: indoors/outdoors

Ambient atmosphere: industrial

Ambient temperature: -25 ... +80 °C

Material housing: sheet steel, black

powder-coated

Material lock portions: stainless steel

Mounting: $10 \times M6$ stainless steel bolts

and if applicable

 $10 \times M6$ stainless steel nuts,

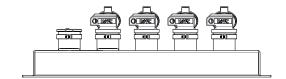

A2-70

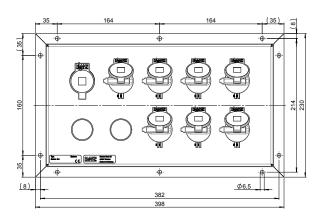

(fasteners not supplied)

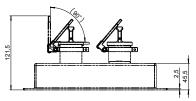

Configuration

primary/secondary locks: see page 2

Dimensions

All dimensions in mm General tolerances to DIN 2768-m
