Product Description

The bks+ ultrasonic web edge sensor is a fork sensor for scanning the edges of sound-impermeable and slightly sound-permeable materials such as foil or paper. The fork's lower leg is equipped with an ultrasonic sensor which cyclically emits short sound impulses, which are detected by the ultrasonic receiver accommodated in the upper fork leg. Material immersing into the fork covers this sound path and thus attenuates the receive signal, which is evaluated by the internal electronics. An analogue signal and a binary value via IO-Link is output in dependence of the coverage degree. The bks+6/FIU optional can be programmed using the LinkControl-Adapter LCA-2 and LinkControl software.

IO-Link

The bks+6/FIU sensors are IO-Link-capable in accordance with IO-Link specification V1.1.

Safety Notes

■ Read the operating instructions prior to start-up.
■ Connection, installation and adjustment works may only be carried out by expert personnel.
■ No safety component in accordance with the EU Machine Directive.

Installation

■ Mount the sensor at the installation site.
■ Connect a connection cable to the M12 device plug.

Start-Up

■ Connect the power supply.
■ Carry out the adjustment to the web material in accordance with the diagram.

Synchronisation

If two or more edge sensors are mounted in a distance < 50 mm the internal synchronisation should be used. Connect Sync-channels (Pin 5 at the units receptacle) of all sensors.

Factory setting

■ Analogue output on voltage output
■ Rising analogue characteristic (0 V at maximum coverage)
■ Switched output on NOC
■ Switched output window is ± 4.5 mm around zero position.

Maintenance

microsonic sensors are maintenance-free. With heavy dirt deposits, we recommend a cleaning of the white sensor surface.

Notes

■ Working range and gradient of the analogue output curve depend on the ultrasonic transducers and cannot be adjusted. The working range always is ≥ 40 mm.
■ For sound-impermeable materials the sensor can be adjusted to the environmental conditions by the 1-point adjustment procedure.
■ For slightly sound-permeable materials the sensor has to be set up to the material and the environmental conditions by using the 2-point adjustment. Carry out a practical test to find out whether a material is slightly sound-permeable.
■ For optimum measurement results the material to be detected should be kept in a range of ± 5 mm around the centre between the upper and lower fork leg.
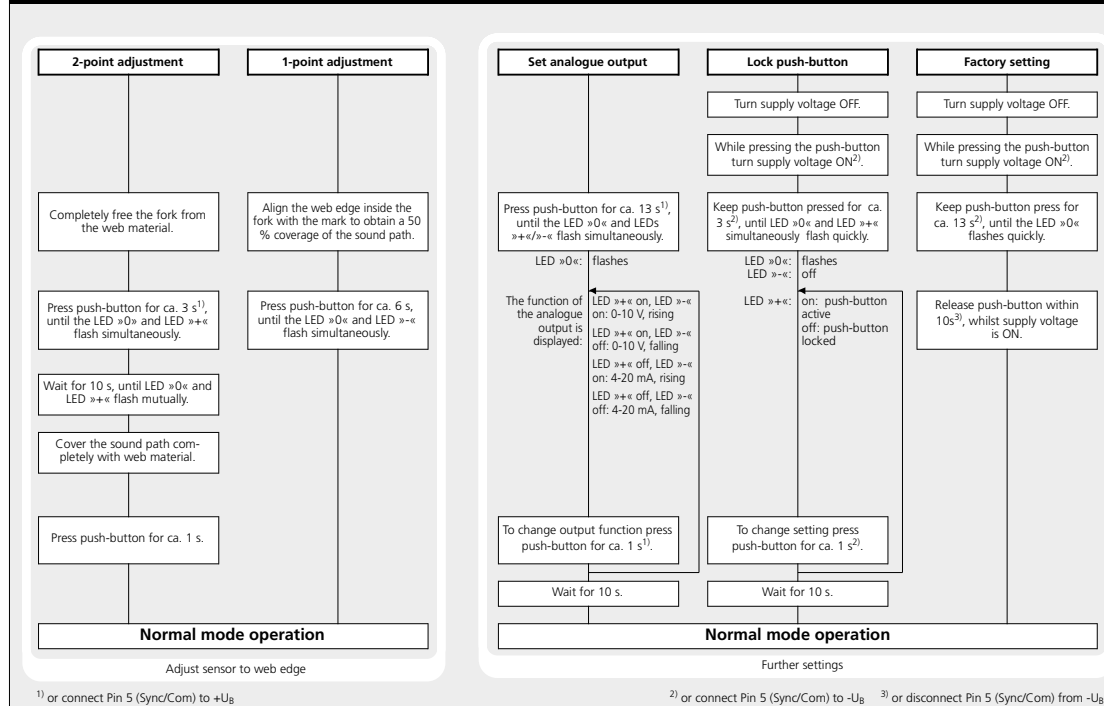

- Via the Teach-in button on the edge sensor's top or via Pin 5 on the device plug, the sensor can be adjusted to the material to be controlled.
- Choosing between rising and falling output characteristic is possible.
- Three LEDs indicate the position of the web material inside the fork.

Sensor adjustment with Teach-in procedure

Adjust sensor to web edge

2-point adjustment	**1-point adjustment**
Completely free the fork from the web material.	Align the web edge inside the fork with the mark to obtain a 50 % coverage of the sound path.
Press push-button for ca. 3 s[1], until the LED »0« and LED »+« flash simultaneously.	Press push-button for ca. 6 s, until the LED »0« and LED »-« flash simultaneously.
Wait for 10 s, until LED »0« and LED »+« flash mutually.	
Cover the sound path completely with web material.	
Press push-button for ca. 1 s.	

Normal mode operation

Further settings

Set analogue output	**Lock push-button**	**Factory setting**
	Turn supply voltage OFF.	Turn supply voltage OFF.
	While pressing the push-button turn supply voltage ON[2].	While pressing the push-button turn supply voltage ON[2].
Press push-button for ca. 13 s[1], until the LED »0« and LEDs »+«/»-« flash simultaneously.	Keep push-button pressed for ca. 3 s[2], until LED »0« and LED »+« simultaneously flash quickly.	Keep push-button press for ca. 13 s[2], until the LED »0« flashes quickly.
LED »0«: flashes	LED »0«: flashes	
The function of the analogue output is displayed:	LED »-«: off	Release push-button within 10s[3], whilst supply voltage is ON.
LED »+« on, LED »-« on: 0-10 V, rising	LED »+«: on: push-button active off: push-button locked	
LED »+« on, LED »-« off: 0-10 V, falling		
LED »+« off, LED »-« on: 4-20 mA, rising		
LED »+« off, LED »-« off: 4-20 mA, falling		
To change output function press push-button for ca. 1 s[1].	To change setting press push-button for ca. 1 s[2].	
Wait for 10 s.	Wait for 10 s.	

Normal mode operation

[1] or connect Pin 5 (Sync/Com) to +U_B   [2] or connect Pin 5 (Sync/Com) to -U_B   [3] or disconnect Pin 5 (Sync/Com) from -U_B

Technical data

fork width	60 mm
fork depth	73 mm
working range	≥ 40 mm (± 20 mm)
transducer frequency	ca. 310 kHz
resolution	0.02 mm
reproducibility	± 0.1 mm
operating voltage U_B	20 to 30 V DC, reverse polarity protection
voltage ripple	± 10 %
no-load current consumption	≤ 60 mA
housing	zinc die cast chromed, plastic parts: PBT ultrasonic transducer: polyurethane foam, epoxy resin with glass contents
class of protection to EN 60 529	IP 65
type of connection	5-pin M12 initiator plug, brass, nickel-plated
controls	Teach-in-button
indicators	LED green: center or within switching window LEDs yellow: deviation from centre/switching window
programmable	LCA-2 with LinkControl
synchronisation	internal synchronisation up to 10 sensors
operating temperature	+5°C to +60°C
storage temperature	-40°C to +85°C
weight	280 g
response time	6 ms
repetition rate	4 ms
time delay before availability	< 300 ms
order no.	bks+6/FIU
analogue output	current output 4-20 mA voltage output 0-10 V short-circuit-proof, switchable rising/falling
switched output	Push-Pull, U_B -3V, $-U_B$ +3 V, I_{max} = 100 mA switchable NOC/NCC; short-circuit-proof

1 Push-Pull switched output and analogue output

- The sensor can be reset to its factory settings (see »Sensor adjustment with Teach-in procedure, further settings«).
- Using the LinkControl-Adapter LCA-2 (optional accessory) and the LinkControl-Software V7.6 all Teach-in- and additional sensor parameter settings may be made.
- Depending on the function the ultrasonic transducers in the upper and lower fork leg are mounted with a slope of 2°.

IO-Link Mode

The bks+6/FIU sensors are IO-Link-capable in accordance with IO-Link specification V1.1 and compatible to specification V1.0.

Note
- In IO-Link mode Teach-in and Link-Control are not available.

Process data
The bks+ cyclically transmits the value corresponding to the measured coverage degree with a resolution of 0.01 mm.

Service data
The following sensor parameters may be set via IO-Link.

Teach-in via push-button
The push-button can be activated/deactivated for sensor settings with Teach-in.

Temperature compensation
The temperature compensation is used for measurement value correction for varying ambient temperatures and can be disabled.

Analogue output mode
For the analogue output either the function output voltage or current output can be selected.

Rising / falling analogue characteristic
The analogue characteristic can be set on rising (0 V / 4 mA at full coverage) or falling characteristic.

Set NOC/NCC
The NCC or NOC output function can be preset for the switched output.

Switching off the LEDs
When activated, the LEDs are switched off 30 seconds after a key press. After a new key press they will run for 30 seconds. This automatic shutdown can be deactivated.

Measurement filter
bks+ ultrasonic sensors provide for a choice of 3 filter settings:
- F00 (no filter)
  Each ultrasonic measurement acts on the output in an unfiltered manner.
- F01 (average value filter)
  Forms approximately the arithmetic mean of several measurements. According to the mean value the output is set. The number of measurements, from which the mean is formed is dependent on the chosen filter strength.
- F02 (median filter)
  Finds the median of several measurements. According to the median the output is set. The number of measurements, for which the median is determined is dependent on the selected filter strength.

Filter strength
For both measurement value filters, a filter strength between P00 (weak filter effect) and P09 (strong filter effect) can be selected.

Switching window
If the web edge is within the switching window the switching output is set. The switching window is defined by the adjusted center and the width.

Note
The switching window has to be within the operating range.

System commands
With 5 system commands the following settings may be carried out:
- restore IO-Link parameters to their factory settings
- sensor adjustment: fork cleared.
- sensor adjustment: fork 50 % covered
- sensor adjustment: fork 100 % covered
- reset all sensor parameters including the IO-Link parameters to their factory settings.

Events
The bks+ sensor sends the following events:
- parameter was changed
- sensor adjustment successful
- sensor adjustment failed

IODD file
The latest IODD file you will find on the internet under www.microsonic.de/en/IODD.
